2 **SHELL-FISH Registration**

How/why/when – do we link with SHELL? Do modules register with SHELL-FISH?

What information do we need? (Reg no, module no. C/W no.). Should this be the same info as SHELL? – of so – how?

SHELL-FISH Annotated Coursework

Coursework uploaded: coursework1.doc
 Date:18/10/04
 Module: ABC102
 Tutor: F.Flintstone
 Student:: John Smith

A sample piece of coursework**Abstract**

The SHELL-FISH project aims to deliver a learning support system by providing learners with a facility to obtain feedback, a development plan and a record of progress related to that feedback. [Teacher's](#) will have a feedback management system which will allow the accessing and updating of a learner's record of progress and previous feedback.

These user-facing tools support both lifelong learning planning and ePortfolio systems. SHELL-FISH will be a plug-in to the SHELL project, which is the leading inter-operability framework, working to UK LEAP and IMS LIP standardised data transfers. SHELL has already developed, tested and proven the technical infrastructure and the base Learner Record for distributed e-Lifelong Learning. The SHELL Project Director has been consulted and is fully supportive of SHELL-FISH. The SHELL-FISH plug-in will use the inter-operability features of SHELL whilst creating a pedagogically sound example of effective practice in learning, teaching and technology.

Sub Theme will appear

INTRODUCTION

Computers are becoming indispensable onboard yachts today. They fulfil several useful functions such as accounting, inventory, printing and email. This paper will address issues such as computer networks and printing and provide some implementation suggestions. Email and Internet access will be briefly discussed.

Finally, computer applications customized to fulfil specific requirements on yachts will also be discussed.

SYSTEM IMPLEMENTATION

Issues pertaining to the overall computer system selection, design and implementation will be addressed in this section.

Computer Selection

The software applications that will run on a computer often determine what type of computer hardware is required. It is best to contact the software vendor to determine any special hardware requirements and if
